DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Noriyama et al. (US 5,132,819).

Noriyama et al. discloses a device comprising the steps of electrically cutting off other pixels among a plurality of connected pixels excluding a predetermined pixel from a signal supply line; and drive the other pixels by a signal supplied to the predetermined pixel (see col. 8, lines 18-31).

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claim 4 is rejected under 35 U.S.C. 103(a) as being unpatentable over Noriyama et al. in view of Katayama et al. (US 5,151,807).

Noriyama et al. discloses a device comprising electrically connecting a pixel electrode of a pixel, where a defect has occurred, to a pixel electrode of an adjacent pixel (see col 18-31).

However, the reference does not disclose that the pixel electrode of the pixel having the defect is connected to a pixel electrode of a pixel having a color filter identical in color to the pixel.

Katayama et al. discloses a device wherein a pixel electrode is connected to a pixel electrode of a pixel having a color filter identical in color to the pixel (see col. 17, lines 35-40).

It would have been obvious to one having ordinary skill in the art at the time the invention was made to have the pixel electrode of the pixel having the defect connected to a pixel electrode of a pixel having a color filter identical in color to the pixel in order to drive the defected pixel with similar characteristics of the connected pixel, thereby maintaining the consistency of the device, leading to a more inconspicuous defect.

Allowable Subject Matter

5. Claim 2 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
6. Claim 3 is allowed over prior art.
